

### Fit Ladder (Tower)

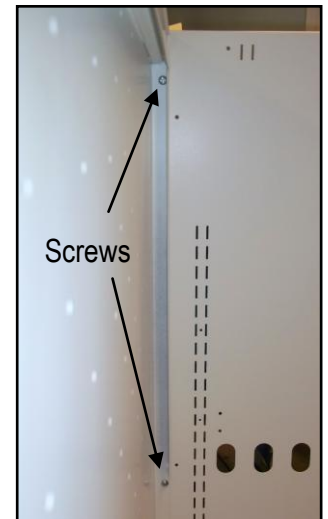

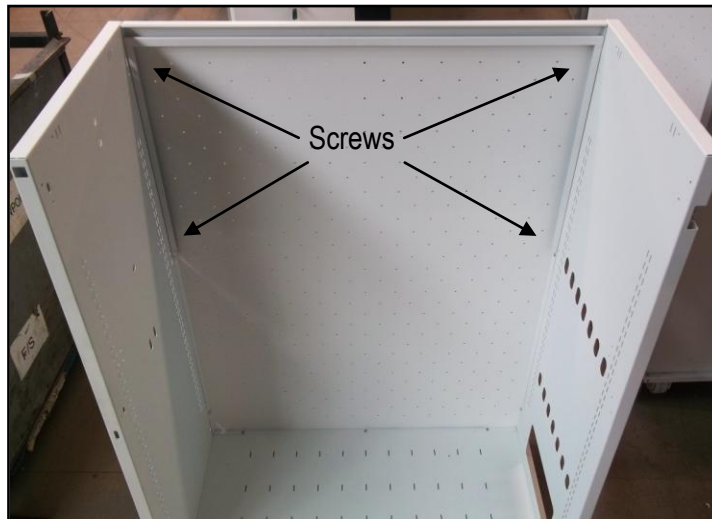

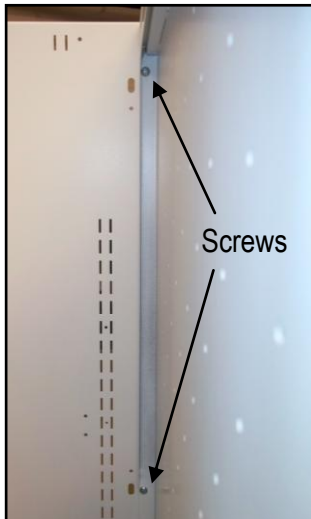

The ladders are fitted into the left and right recesses at the rear of the extension drawer. To access the recesses the shelf will need to be removed.

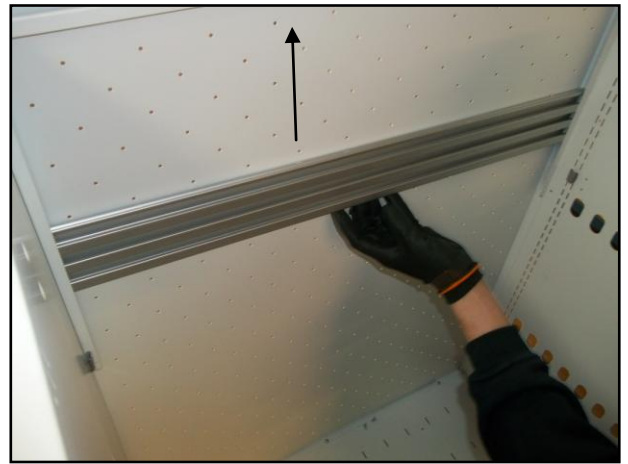

*(Picture of a General Tower Drawer, not exact model)*

The shelf can be lifted quite easily off the four shelf clips. The shelf clips do not require removing however if one comes out it will require placing in the same height location slot.

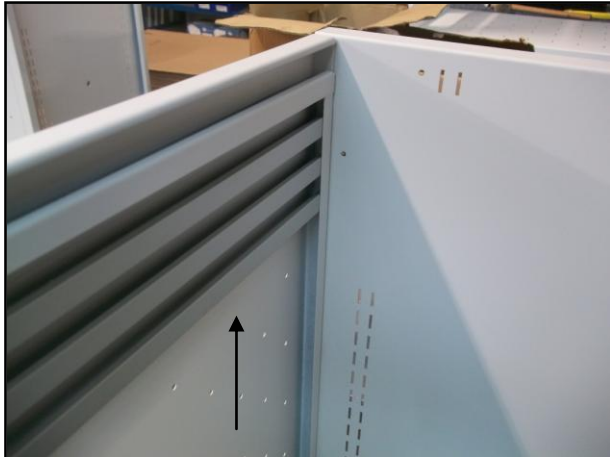

The four screws behind the recess will need to be removed to allow for the ladder to be fitted.

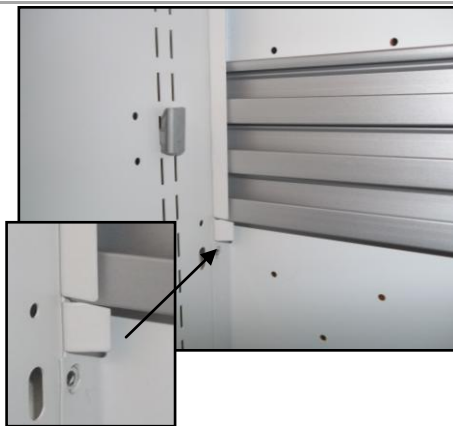

Position the top of the Ladder behind the bottom of the recess and slide upwards until the ladder is at the top of the recess.

*Please Note:*

*Only one piece of ladder shown in picture for fitting instruction purposes, there would usually be four or five pieces joined together.*

Once the ladder is located at the top of the recess, the four screw hole should be visible behind the ladder, refit screws.

To secure the ladder the tabs at the bottom of each recess can be pushed backwards.

Refit shelf on top of the shelf clips.
